

HyDraw CAD 2019 SP2.2 IT

Applicability: HyDraw CAD 2019 IT with/without SP1 installed

Issues Resolved:

1. a. Unable to invoke Search by pressing the Enter key.
b. Unable to invoke last used command by pressing the Enter or the Spacebar key. "
2. When using Alphabetic grouping scheme, incorrect number is assigned after 1AZ.
3. a. Unable to use the Export to MDTools option without setting the MDTools library path.
b. Unable to change the MDTools library path."
4. Export to MDTools does not work on selecting the manifold envelope.
5. When using a WebCAD schematic, the Export to MDTools command displays an error message.
6. In a specific case, unable to replace a symbol in a subsystem.
7. When the screen resolution is more than 100%, then the HyDrawCAD 2019 License Details dialog is partially visible, and you are unable to validate the license.
8. When using the Move command, the Terminator does not move with the symbol.
9. When Control and Drain lines are connected, Schematic Check does not display error.
10. In few cases, Export to MDTools does not export Net details of external ports.
11. Solenoid naming is inconsistent in the Edit Master Symbol and Solenoid Info dialogs.
12. Inconsistent sorting of the Parts list, when the Assembly ID is used with the Item ID.
13. For Connection Lines, Match Properties does not copy the Display Settings.
14. In the Create Parts List dialog, Parts List columns' width is not resizable.
15. In specific cases, some Nets are not displayed in the Net list.
16. In few cases, inserting symbol into drawing displays error."
17. In a specific case, moving connected symbols create unwanted loop.
18. For some solenoid symbols, solenoid IDs and functions display at the drawing origin (0,0).
19. In Update from Excel, unable to resize column width and window, when selecting Model codes.
20. Error Flags created in the drawing by Net list are small and unidentifiable.
21. In few cases, inserting symbol into drawing displays error.
22. In a large schematic, HyDraw Property Manager flickers when selecting a symbol.
23. In few cases, moving external ports disconnect the connections.
24. In a specific case, Slip-in-Insert is not displayed in the Net list.
25. In few cases, Search from Library does not list all properties in HyDraw Property Manager, such as:
 - When in a database, same property name is used in multiple tables.
 - When a component type has more than 20 properties.

Date: Jul 5, 2019

HyDraw CAD 2019 SP1 IT

Applicability: HyDraw CAD 2019.0.0.6 x64 IT

Issues Resolved:

1. Moving an external port or its port name, snaps to the corner of the envelope.

2. When switching between opened drawings, closed work windows of HyDraw Library Explorer, HyDraw Property Manager, Export to MDTools pop up.
3. Unable to open dxf file created in HyDraw.
4. Repeated adding/editing of Library symbols increases the saving time of the schematic.
5. Replaced external port does not reorient with respect to the envelope.
6. Zero length Connection line appears in schematic check.
7. Instability with unconfigured AccessDatabaseEngine_X64.
8. File name in Drawing tab does not change, when using the Save As command.
9. When Sub-System has an accessory with reassigned balloon type or Item ID, a larger balloon is displayed.
10. Exploding Sub-System to components more than once, creates some balloons at drawing origin.
11. When reassigning Item ID, envelope in Sub-System is not numbered first.
12. Jumping reference deleted along with the connection line, recreated after merging any two connection lines.
13. Update From Excel, not updating by Part Number.
14. Using the AutoCAD Trim command with connection line results in instability.
15. Drawing Update displays exception when opening an old drawing.
16. Edit Symbol Port: After modifying ports names, clicking the Cancel button saves changes.
17. The yellow Update icon does not appear, when a column is introduced in Part List.
18. In some cases, error when closing the drawings.
19. Hose list does not display Assembly ID of Hoses.
20. Mirroring a schematic second time results only in mirroring of HyDraw texts.
21. Update Parts List: When quantity values change, the corresponding row gets deleted in case of grouped items.
22. Inserting custom External Port displays error.
23. Export to MDTools command fails when items have same item ID.
24. When the drawing includes a Parts List, the Convert to HyDraw command causes instability.
25. When the drawing includes a Parts List, joining a custom Connection Line (e.g. Line1) to another Custom Connection Line's tip (end) displays error and causes instability.
26. HyDraw Library Explorer: Component tab slightly overlaps.
27. When an Item ID is manually positioned, the Reassigned Item ID is not at its new location.
28. Export to MDTools: Order of CAD models linked to a model are incorrect.
29. Copied Sub-System, takes new balloon type from HyDraw option for Components.
30. In Update Parts List, the yellow Update icon does not appear for,
 - a. Components Accessories.
 - b. System Accessories.
 - c. External Port Accessories.
 - d. Item ID/Accessory ID edited by double click.
 - e. Grouped Hose ID.
 - f. Multiple Parts List.
31. In Update Parts List,
 - a. Value of design properties is not updated.
 - b. Currency data types are not updated correctly.
32. Updating the earlier version drawing displays error.
33. Instability when deleting/renaming the "C:\VEST" folder.
34. For drawing with split Parts List, using the Save As command causes instability.

35. In some cases, drawing Envelope Line across Connection lines causes the connection line to be inclined and introduces duplicate ports.
36. Stretching the envelope, when an envelope line segment is not straight, moves Ports to the opposite side of the envelope line.
