HyDraw-CAD-2019-SP3.0-IT

Applicability: HyDraw CAD 2019 IT with/without SP2.2-IT and Hotfixes installed.

Issues Resolved

1. Instability with Export to PDF when the drawing contains split table in Parts List.

2. When Part List is exploded in the drawing, symbol insertion displays error.

3. Edit model data in HyDraw Property Manager displays error when Parts list is exploded in the drawing.

4. OSANP turns OFF on inserting an external port.

5. Inefficient search from FluidPowerTools.com for specific Model families.

6. CUI command displays an error for Regional settings other than "EN-US".

7. Slow performance with large schematics.

8. Component data search is slow.

9. Performance issue when working with multiple drawings.

10. Part Number search shows incorrect results.

11. Update from Excel only works with default column names: Model Code, Model Family, Description, and Manufacturer.

12. Change Text Height creates empty balloons for Accessory Item ID.
