

## MDTools 775 Hotfix 08

Applicability: MDTools 775 with SP1, Hotfix 04, 05, and 06

### Issues Resolved:

1. Modify All Engraving dialog: Last used font is not saved in memory.
2. Engrave Text Chart: Update Precision command not working.
3. User with only Roaming Folder access, unable to open Local Help.
4. When a merged orifice is inserted from HyDraw Schematic and then renamed, Auto Assemble displays an error.
5. Generate Machining ID: When using a naming scheme with index as numeric, and count as an alphabet to group identical cavities, MDTools uses special characters in ID, for the faces containing more than 24 identical bolt holes.
